

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Cancelled)
2. (Cancelled)
3. (Cancelled)
4. (Currently Amended) A rock bolt according to claim ~~[[1]]~~ 14 wherein the tubular section member, in a non-expanded form, includes a generally U-shaped outer portion and a smaller, generally U-shaped inner portion which is positioned at least partly inside the outer portion.
5. (Currently Amended) A rock bolt according to claim ~~[[1]]~~ 14 which includes a bearing plate which is engaged with the tubular section member at a position at which the bearing plate abuts structure which serves to retain the bearing plate engaged with the other end of the tubular section member and the rock face when the rock bolt is inserted in a drill hole.
6. (Cancelled)
7. (Currently Amended) A rock bolt according to claim ~~[[6]]~~ 17 wherein the tubular section member is swaged or welded onto the shank, or is threadedly engaged with the shank.
8. (Currently Amended) A rock bolt according to claim ~~[[6]]~~ 17 wherein ~~[[an]]~~ the one end of the tubular section member at least partly encloses ~~[[an]]~~ the first end of the shank.
9. (Cancelled)

10. (Currently Amended) A rock bolt according to claim ~~[[6]]~~ 18 wherein the wedge member is ~~[[at one]]~~ connected to the second end of the ~~[[shank]]~~ further elongate member, and the plurality of shells abut an outer surface of the wedge member, and ~~[[which]]~~ the mechanical expansion anchor unit further includes a bail which is connected to the shells and a biasing member which acts between the bail and the wedge member.

11. (Cancelled)

12. (Cancelled)

13. (Cancelled)

14. (New) A rock bolt which in use is inserted in a drill hole extending from a rock face into a rock body and which includes: a radially expandable elongate tubular member which is formed with an inlet through which a pressurized fluid can pass into an interior of the tubular member, thereby to expand the tubular member in a radial direction and so effect a first frictional anchoring action of the tubular member with a wall of the drill hole at a first location near a mouth of the drill hole; a further elongate member having a first end secured to one end of the tubular member and a second end; and a mechanical expansion anchor unit that is connected to the second end of the further elongate member and which is operable to effect a second anchoring action with the wall of the drill hole at a second location that is displaced from the first location.

15. (New) A rock bolt according to claim 14 wherein the first end of the further elongate member is directly secured to the tubular member.

16. (New) A rock bolt according to claim 14 which includes a coupling device which is secured to the tubular member and the further elongate member is indirectly secured to the tubular member by being detachably threadedly engaged with the coupling device.

17. (New) A rock bolt according to claim 14 wherein the further elongate member is a shank or stud.

18. (New) A rock bolt according to claim 14 wherein the expansion anchor unit includes a wedge member, and a plurality of shells which are movable by the wedge member to effect the second anchoring action.

IN THE DRAWINGS:

Please amend FIG. 1 to add reference numerals 2-4, which are circled in red on the attached annotated copy of FIG. 1 and which are mentioned in the Brief Description of FIGS. 2-4 in paragraph [0016] on page 3 of the present specification. A revised formal drawing for FIG. 1 likewise is attached.
